Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. PROBLEM STATEMENT:

Dave got two students who want help with their doubt. Each hands out an integer and wants to find if one integer is positive while the other is not divisible by 3. Write a program to achieve this and conclude for them.

Input Format

The first line of input represents the first integer.

The second line of input represents the second integer.

Output Format

The output should display as "One of the integers is positive while the other is not divisible by 3." or "Neither of the integers meets the condition."

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 4

3

Output: One of the integers is positive while the other is not divisible by 3.

Answer

```
// You are using Java
import java.util.Scanner;
```

```
class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        // Read two integers
        int a = sc.nextInt();
        int b = sc.nextInt();

        // Check the condition for either order
        boolean cond1 = (a > 0) && (b % 3 != 0);
        boolean cond2 = (b > 0) && (a % 3 != 0);

        // Output based on condition
        if (cond1 || cond2) {
            System.out.println("One of the integers is positive while the other is not
divisible by 3.");
        } else {
            System.out.println("Neither of the integers meets the condition.");
        }

        sc.close();
    }
}
```

Status : Correct

Marks : 10/10
